

## Risk assessment

1. Items with defects such as the edges of the helmet or marks of impact  
Impact resistance and penetration resistance may be impaired.
2. The shell is discolored or dirty with paint etc.  
The material of the shell is invaded by chemicals and heat, which affects the impact resistance and penetration resistance.
3. The shell has been modified. (Addition of ventilation holes, etc.)  
Impact resistance and penetration resistance may be impaired.
4. Parts and accessories other than those specified by us are installed.  
The original performance may not be exhibited.
5. Wear without adjusting the headband or chin strap.  
It wobbles during use and becomes easy to come off, and the protection performance cannot be fully exhibited.
6. Leave it in a hot place or a place exposed to direct sunlight for a long time.  
It causes deformation and discoloration, and the protection performance is reduced.
7. When cleaning, use an organic solvent.  
When an organic solvent is used, the material of the shell is greatly deteriorated, and the impact resistance and penetration resistance are deteriorated.
8. Do not change the harness or chin strap.  
Regularly replace the harness and chin strap (for about 1 year) to maintain performance.
